OUR PRODUCTS

The main function of an BOILER Fan is to supply a huge flow of air or gas to the various processes in the industries. We manufacture and provide customized selection and design to suit each application.

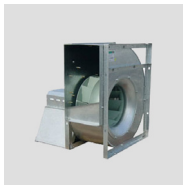

INDUSTRIAL FANS

BLOWERS

AIR POLLUTION CONTROL SYSTEMS

OUR SERVICE

VIBRATION ANALYSIS

Vibration Analysis is a maintenance method by which the problem is identified in a rotating equipment / machinery like Impeller, rotating machinery equipment like Fans, Shaft, etc. The vibration of any object or rotating equipment is characterised by variations of intensity, frequency, amplitude.

STATIC BALANCING / DYNAMIC BALANCING

We would like to introduce our Company in dynamic balancing providing exclusive services like on site dynamic balancing, vibration analysis, condition monitoring etc. we do undertake On site dynamic balancing job for all types of Fans and Blowers, ID, FD, SA Fans at your site in assembled condition which saves production loss, the loss of manpower and loss due to breakdown of machinery.
